Application Developer Patient Access API • Legal Attestations

Premera Blue Cross (Premera) asks that any App developer planning to access Premera's Patient Access Application Programming Interface (API) attest that it complies with the following statements. If you do not attest to compliance with these statements, we will notify any member that requests their protected health information using the selected App of that fact and suggest that the member select an App that has attested to complying with these statements:

- The App has a publicly available privacy policy, written in plain language, that has been affirmatively shared with the member prior to the member authorizing the App access to their health information. To "affirmatively share" means that the members must take an action to indicate they saw the privacy policy, such as click or check a box.
- The App's privacy policy includes, at a minimum, the following important information:
 - How a member's health information may be accessed, exchanged, or used by any person or other entity, including whether the member's health information may be shared or sold at any time (including in the future);
 - A requirement for express consent from a member before the member's health information is accessed, exchanged, or used, including receiving express consent before a member's health information is shared or sold (other than disclosures required by law or disclosures necessary in connection with the sale of the application or a similar transaction);
 - If an App will access any other information from a member's device; and
 - How members can discontinue the App's access to their data and what the App's policy and process is for disposing of their data once the member has withdrawn consent.
- The App follows these security best practices:
 - Data is encrypted at rest and while in transit.
 - Data is stored in the U.S.
 - App development follows security best practices (e.g., OWASP Top 10 for Web, Mobile & API).
 - If cloud technology is used, the app uses a cloud application security framework (e.g., CSA Security Guidance).
- The App developer has reviewed the HL7-FHIR Security and Privacy Module.
- The App developer follows the Carin Alliance Code of Conduct.

This Attestation is legally binding to the App developer, and non-compliance may incur action from the Federal Trade Commission (FTC) or other government agencies to enforce these commitments and the rights of Patients in the United States.
